

PRODUCT RELEASES

The *Processor* Product Releases section includes brief overviews of data center products.

All products listed have been released recently, so use this section to get up to date with what's new on the market and to find products you need.

Manufacturers:
Do you have a new product that data center/IT managers would be interested in learning about?
Send your press release or product information to press@processor.com.

PHYSICAL INFRASTRUCTURE

■ Addlogix GreenView KVM Switch

Addlogix launched its new enterprise-grade GreenView KVM switches, which are 1U rackmountable KVMs available in

digital life ... addlogix style

4-, 8-, and 16-port models. Customers can daisy-chain up to 16 GreenView KVMs to control as many as 256 computers from a single keyboard, mouse, and display terminal. Features include support for bi-directional PS/2 and USB input devices, high-resolution video, a multilanguage on-screen display, and repetitive simultaneous DDC queries from multiple Windows 7 and Server 2008 systems. Addlogix's exclusive GreenView power management functions let you maximize energy efficiency in the data center. Systems admins will appreciate Direct Hot Key switching, which lets users quickly access systems using fewer keystrokes. For more on this product, see page 17.

■ Bricsys NV & Tyco Fire Protection SprinkCAD For Bricscad

Bricsys NV and Tyco Fire Protection announced SprinkCAD for Bricscad. The software is used to create designs and coordinate drawings for fire sprinkler systems. Features include full versions of SprinkCALC and SprinkSLIC, support for AutoCAD and Bricscad V11, and a full 3D Residential version of 3D Riser.

■ Gefen CAT5-1600A, CAT5-1600HD

Gefen released two KVM extenders that can support PCs hundreds of feet away over CAT 5 or 6 Ethernet cable. The CAT5-1600A and CAT5-1600HD support USB 2.0 devices, such as keyboards and mice, along with both DVI and VGA video of up to 1,920 x 1,200 resolution.

■ Packet Power Environmental Monitor

Packet Power announced the availability of its Environmental Monitor, which tracks

temperature and humidity fluctuations in real time to give admins a 3D view of temperature in the rack. The Packet Power Environmental Monitoring sensor can be configured to monitor one cabinet at six different points, two adjacent cabinets at three points apiece, or six adjacent cabinets at one point apiece. The device sends monitoring data over a wireless network and can communicate with multiple Packet Power monitors within a single facility, allowing admins to scale coverage to hundreds of

monitoring points. Other features include high-precision measurement, real-time heat maps of the facility, tracking via a Web interface, and customized reporting. The Environmental Monitor also easily integrates with Packet Power's Smart Power Cables to record real-time power consumption. For more on this product, see page 13.

■ Perle Systems IOLAN Rugged Device Servers

Perle Systems unveiled two rugged device servers that enable IT personnel to add Web and network connectivity to serial devices. The IOLAN DS1T is ideal for networking remote serial devices that operate in extreme conditions, while the IOLAN SDS3M is best for remote console management, data capture, or equipment monitoring applications.

■ Racktivity EnergySwitch 1008 PDU

Racktivity is currently offering the EnergySwitch 1008, an advanced power distribution unit, to assist IT personnel in power consumption management, advanced metering, switching, and predictive analysis. The ES1008 uses Racktivity's

patent-pending EnergyDNA technology to provide data center managers with vital power quality analytics, which customers can use to make educated load balancing and asset distribution adjustments, as needed, to cut costs and manage resources. The ES1008 accurately reports current, voltage, power, and power factor and energy consumption. Other features include remote monitoring and control, real-time true RMS measurements, sequential start-up, and programmable thresholds for alarms and warnings. For more on this product, see page 31.

■ Raritan Dominion KSX II

Raritan's Dominion KSX II integrated security appliance is designed to let IT

personnel securely manage remote IT equipment. The Dominion KSX II meets U.S. government and Department of Defense mandates and standards thanks to support for FIPS 140-2 encryption, Smart Card/Common Access Card authentication, and 256-bit AES encryption. Raritan's KVM-over-IP and Serial Console Server remote access technologies let users manage, troubleshoot, and configure servers, blades, switches, routers, network appliances, PBXes, firewalls, load balancers, PDUs, and other equipment. A Web-based console offers real-time reports. For more on this product, see page 13.

■ RLE Technologies LD2100

RLE Technologies announced the launch of its LD2100 Web-accessible, distance read leak-detection panel. The LD2100 can utilize up to 5,000 feet of RLE's patented liquid-sensing cable, can

be used with or without spot sensors, and can be configured to cover up to 32 physical or virtual zones. It will detect and report the presence of any conductive fluid, including water, alcohol, and glycol, along the length of the cable, and it will identify the distance to the leak. The LD2100 can be used as a freestanding unit or can easily integrate into an existing building management system or network management system. For more on this product, see page 17.

■ STULZ-ATS CyberMOD® EC Fan Retrofit Kit For CRAC

The STULZ-ATS CyberMOD™ EC Fan Retrofit Kit is an economical approach to finding significant fan energy savings in the cooling systems of existing data centers with no modification to infrastructure

or floor tile configuration. CyberMOD is an easy-to-install EC Fan upgrade kit designed to retrofit older Liebert-brand computer room air conditioners by replacing inefficient, belt-driven, forward-curved DWDI fans with efficient EC plug fans. Benefits include adjustable fan speed with no VFD, lower running costs, low maintenance, no belts or belt dust, low-noise operation, and built-in redundancy. In addition, the CyberMOD is more efficient than a belt-driven motor and offers optimized air distribution into the data center raised floor to avoid hot spots.

NETWORKING & VPN

■ Black Box Network Services Switches

Black Box Network Services released its latest switches, the PoE switch for extending Ethernet reach via Power over Ethernet and the Heavy-Duty Edge family of switches suitable for many different environmental conditions and power types. Each of the latter features two SFP ports and a single 10/100/1,000Mbps copper port.

■ Certeon aCelera 4.0

Certeon announced aCelera 4.0, its WAN optimization software designed to help companies distribute applications and monitor data more effectively. aCelera's features include VRRP support for deployment in virtual environments, Outlook Anywhere MAPI Acceleration for Microsoft Outlook and Exchange, and better performance on Microsoft's Hyper-V platform. aCelera 4.0 also has a

performance monitoring dashboard that enables IT managers to find potential problems in WANs and see which applications have the most traffic. Each one of Certeon's aCelera solutions is set to receive an automatic update to 4.0.

■ DecisionOne Network-Based Support

DecisionOne launched an onsite and remote solution for network care and improvement—a service that promises proactive verification that a network is secure, reliable, and functional. Aimed at midsized enterprises, the solution combines DecisionOne's onsite technical support with Cisco's Smart Care services, including network monitoring and proactive maintenance.

■ Infoblox IPAM Insight

Infoblox released Infoblox IPAM Insight, which is an advanced IP address management platform for physical and virtual environments. Infoblox IPAM features a single unified management interface from which users can automate the collection and management of IP addresses. Users can also view real-time detailed network data and both physical and virtual network elements at Layer 2 and Layer 3. Capabilities include determining the applications and virtual machines that will be impacted by a specific outage, sourcing performance issues following a hardware or software update, or tracing problems between the data center and the desktop. Pricing for Infoblox-1102 appliances starts at \$14,995.

■ Net Optics Phantom Virtual Tap

Net Optics released Phantom Virtual Tap, a scalable solution providing organizations the ability to monitor physical and virtual network traffic. According to Net Optics, the release provides total visibility of inter-VM traffic moving between virtual servers and hypervisor stacks, letting IT managers monitor, analyze, audit, and report on traffic. Licensed per ESX/ESXi server, Phantom Virtual Tap pricing starts at \$2,500. Net Optics CEO Bob Shaw says that Phantom Virtual Tap is currently the only network monitoring solution that allows SMBs to monitor their networks across both physical and virtual deployments. With this release, he states, IT managers for the first time have a solution that enables a holistic view of traffic.

■ SolarWinds Switch Port Mapper

SolarWinds announced its Switch Port Mapper as a standalone tool for \$195. With Switch Port Mapper, IT professionals can remotely discover the users and devices connected to each port on Ethernet switches, along with detailed device and port configuration information such as connected MAC address, IP address, Hostname, port speed, and duplex.

■ VMTurbo Virtualization Management Suite

VMTurbo announced availability of the full VMTurbo Virtualization Management Suite. VMTurbo pinpoints problems, identifies their impact, and recommends corrective actions, which can be automated to ensure healthy and efficient virtual environments. The solution can also combine real-time operational performance metrics with analytics to

PRODUCT RELEASES

drive a broad set of workload management actions.

STORAGE

■ Aberdeen AberNAS LX Series

Aberdeen released the AberNAS LX Series, a storage appliance that comes with a 64-bit Linux operating system and the option of 3TB Hitachi 7,200rpm hard drives. Aberdeen says that the Intel Xeon 5600-based system offers flexible iSCSI target capability as well as enterprise-class NAS storage capacity of up to 198TB. The AberNAS LX family can reach this high level of density with a dual-sided chassis, not to mention external 6Gbps SAS expansion ports. Prices start at \$2,795 for a 1U entry-level model, \$10,995 for a 5U midrange edition, and \$23,995 for 8U enterprise models.

■ Absolute Software Absolute Secure Drive

Absolute Software announced the release of Absolute Secure Drive, a tool for managing SEDs (self-encrypted drives) that meet OPAL specifications. Absolute Secure Drive allows IT administrators to easily configure and set up OPAL SEDs on each computer and to administer users, authentication methods, policies, and system maintenance from a single console.

■ Acronis Backup & Security 2011

Acronis unveiled its Acronis Backup and Security 2011, which is a local backup, online backup, and Internet security platform capable of securing critical data and systems against both internal and external threats. A one-year subscription

costs \$69.99 (5GB backup), but a Premium option with 250GB backup costs \$89.99.

■ AMAX StorMax IO Accelerator Series

AMAX introduced its latest family of StorMax IO Accelerators, designed to meet the demands of IT markets and applications that require high transaction rates and real-time data access. The PCI Express flash-based product delivers superior random I/O performance and low-latency access to storage.

■ BridgeSTOR Virtual Storage-Advanced Data Reduction Simulator Tool

BridgeSTOR released the Virtual Storage-Advanced Data Reduction Simulator Tool, a utility that can show you via text and spreadsheet the deduplication storage space reduction effects a BridgeSTOR VS-ADR appliance could have on your organization's primary and secondary storage. It can be downloaded from the company's Web site.

■ Diskeeper 2011

IT environments are becoming increasingly complex, so performance bottle-

necks in an infrastructure can quickly and seriously impact productivity. Diskeeper Corp. is set to release a new version of Diskeeper for 2011 that not only prevents more fragmentation than ever before—even on the largest and busiest servers—

but also instantly eliminates the rest before it can become a performance liability. Diskeeper 2011 features new data performance technology that can help ensure a major improvement in system efficiency and a reduction in operating costs. The program optimizes read/write speeds, reducing I/O activity an average of 40% and making backups 30% faster on average. Diskeeper 2011 includes Invisi-Tasking, which ensures Diskeeper can maintain system performance. New features include Instant Defrag, which understands how your files are used and ensures they never have to be read in pieces; an Efficient Mode that knows what fragmentation is a problem and what isn't; and a free space consolidation engine that quickly consolidates free space.

■ Iron Mountain Digital Record Center For Medical Images

Iron Mountain announced its Digital Record Center for Medical Images, a cloud-based, vendor-neutral storage solution for archiving important medical patient information, such as X-rays and other images.

■ Kingston Digital DataTraveler 4000, Vault

Kingston released two USB flash drives that give the enterprise necessary security assurances, the company says. The DataTraveler 4000 has FIPS 140-2 Level 2 validation. The DataTraveler Vault can be centrally managed by BlockMaster's SafeConsole server software.

■ NextComputing D-NAS

NextComputing released its line of D-NAS (Deployable Network Attached

Storage) appliances, which provide redundant storage capabilities and Fibre Channel/10G network connectivity. D-NAS can capture and analyze high-bandwidth data at the source, the company says. LSI MegaRAID SAS/SATA/RAID controllers support the internal storage arrays.

■ OWC Mercury Elite-AL Pro Qx2

OWC released the Mercury Elite-AL Pro Qx2, a RAID storage unit that offers up to 12TB of capacity with enterprise-level reliability. The Mercury Elite-AL Pro Qx2 has four hot-swappable bays and support for eSATA, USB 2.0, and 800/400Mbps FireWire connections.

■ Promise Technology SmartStor NSx700 Series

Promise Technology's NSx700 Series of SmartStor NAS offers up to 210MBps iSCSI throughput. The six-bay NS6700 and the four-bay NS4700 feature Promise's advanced RAID engine with support for Predictive Data Migration, Intel Atom processors, RAID 6, bad sector error handling, online RAID migration, and more.

■ RAID Xanadu 260

RAID announced the Xanadu 260, a dense, high-performance HPC storage solution based on 6Gb SAS architecture. Features include a 4U form factor and 60 front-mounted, removable 3.5-inch drives that can sustain 4Gbps and maintain a 180TB capacity in a single enclosure. The storage system features 40Gbps sustained drive reads per rack, a parallel file system to link multiple Xanadu 300 systems into one logical array, and scalability up to 1.8PB.

SECURITY

■ Astaro Application Control, Log Management & Endpoint Security

Astaro announced the release of three IT security products: Astaro Application Control, Astaro Log Management, and Astaro Endpoint Security. Astaro Application Control lets IT administrators monitor application and bandwidth use and adds next-generation firewall capabilities. Astaro Log Management lets users store and analyze log data from all systems and applications. It also features error tracking, automatic alerts, and policy protection. Astaro Endpoint Security includes data leakage prevention that manages the security of peripheral devices. Reporting features help IT track the location of machines in the event of theft or loss.

■ CREDANT Technologies Cloud Encryption

CREDANT Technologies announced the beta program for CREDANT's cloud security platform, which is designed to help enterprise customers more rapidly embrace cloud infrastructure by removing the security roadblock. The program includes CREDANT's cloud encryption software for VDI (virtual desktop infrastructure) private cloud infrastructures.

■ Cyber-Ark Privileged Session Management Suite

Cyber-Ark released details concerning its Privileged Session Management Suite, a solution that aims to improve compliance and risk management threats associated with both internal and external data center threats. The suite has the ability to isolate, control, and record privileged access to data bases, virtual environments, and servers via a platform that aims to reduce TCO.

■ F5 Networks BIG-IP Application Security Manager & Oracle Database Firewall

F5 Networks has announced the integration of its BIG-IP Application Security

Manager with the Oracle Database Firewall. Features of the pairing include F5's database administration and accelerated database replication and Oracle's updated SQL injection protection and correlated reporting for richer forensic information on SQL injection attacks.

■ Fortinet FortiGate-3140B

Fortinet released an addition to its FortiGate product line, the FortiGate-3140B consolidated security appliance. The 3140B is designed for large enterprises and data centers that require maximum firewall, virtual private network, and intrusion prevention system performance in order to optimize protection against blended threats and malware.

■ Gemalto Protiva Mobile OTP

Gemalto announced its Protiva Mobile OTP (One Time Password) security solution for mobile phones. This solution lets users create a username and one-time password for employees, enabling them to securely access servers, email, and other sensitive data. Protiva Mobile OTP supports iPhones, BlackBerrys, and more.

■ Juniper Networks vGW Virtual Gateway

Juniper Networks announced the integration of its vGW Virtual Gateway, a virtualized cloud security solution, with the company's SRX Series Services Gateways. Key features of the vGW Virtual Gateway are zone-based smart policy group creation, automated security enforcement (for new or cloned VMs), VM compliance assessment, and noncompliant VM quarantining.

■ McAfee Mobile Security Suite

McAfee launched a Mobile Security Suite, which consists of WaveSecure and VirusScan Mobile technologies. The firm also introduced its Business Ready Program, which will launch in Q2 2011 to let customers secure mobile devices by installing McAfee Enterprise Mobility Management client software. McAfee also announced the beta of McAfee WaveSecure Software for Android Tablets.

■ M86 Security MailMarshal Email Content Manager

M86 Security announced additional features for its MailMarshal Email Content Manager product, which is designed to satisfy current and future email content management needs as well as policy enforcement needs in the enterprise. The features include enhanced centralized management, increased scalability, and support for Microsoft Exchange 2010.

■ M86 Security Secure Web Gateway Virtual Appliance

M86 Security announced a virtual appliance version of its Secure Web Gateway, which is designed to provide enterprises with more options for deploying M86's malware detection. The addition means that users can deploy Secure Web Gateway as an appliance, hybrid cloud service, or virtual appliance.

■ Methode Electronics LockTalk Data Center Security Access Control System

The LockTalkSM Data Center Security Access Control System from Methode Electronics provides enterprises with biometric identity verification, which allows administrators to control the range of personnel who access the systems in the data center. Enterprises that currently use

key-level access will no longer have to worry about unauthorized personnel gaining access through common cabinet keys or lost or missing keys. The system uses Lumidigm's Mercury Biometric Sensors to capture biometric images in all types of environmental conditions and from all types of people. Administrators can choose from a variety of electronically controlled lock systems to match door types and styles. For more on this product, see page 39.

■ Novell Sentinel Healthcare Solution Pack

Novell announced the release of its Sentinel Healthcare Solution Pack, a unified solution for helping healthcare organizations manage overlapping compliance requirements related to security monitoring. The product is aimed at healthcare providers that need policies and controls for a comprehensive compliance solution to certify compliance with a broad assortment of regulations, while ensuring the security of the sensitive data involved. Novell partnered with IT security consultancy and solutions firm CynergisTek to create the product. Sentinel provides reports, correlation rules, and device support, as well as search and reporting capabilities that enable customers to produce exactly the reports needed for security or compliance audits.

■ OneLogin Phishing Test

OneLogin launched OneLogin Phishing Test, an online test that emulates a typical phishing scam. The test measures the number of employees who enter their login credentials on a fake landing page. Based on test results (the average fail rate is 25%), enterprises can make process changes aimed at securing access to sensitive company data.

■ Oracle Health Sciences Information Manager

Oracle released its Health Sciences Information Manager for data management and privacy of PHI (protected health information). This release is integrated with Oracle Health Sciences Information Gateway in order to support Oracle Health Information Exchange. Features include the Health Record Locator, enhanced information security, and centralized audit records for regulatory compliance standards.

■ Qualys SaaS Platform

Qualys introduced its next-generation SaaS (software-as-a-service) platform to host the QualysGuard IT security and compliance SaaS suite of applications in the cloud. Standards-based integration and middleware ties together the browser, all Qualys applications, six platform services and engines, the user's security and compliance data, scanners, and the QualysGuard KnowledgeBase.

■ Quest Software Quest One Identity Solution

Quest Software announced the Quest One Identity Solution, which is an identity and access management platform that lets users unify identities, roles, workflows, and approvals around existing IAM infrastructures and best practices. Features include single sign-on, provisioning, identity intelligence, role management, multifactor authentication, password management, and privileged account management.

■ RSA-EMC RSA Solution For Security Incident Management

RSA, the Security Division of EMC, announced the RSA Solution For Security Incident Management. The recent solution allows users to automate the process of

locating, prioritizing, and resolving security incidents, such as data loss and other vulnerabilities, in real time. The Solution For Security Incident Management will be available this quarter according to EMC.

■ SafeNet Authentication Manager 8.0

The SafeNet Authentication Manager 8.0 features single sign-on compatibility for logging in to cloud-based or on-premises applications. This solution is part of the SafeNet Trusted Cloud Fabric framework and provides security for mobile access to networks as well as advanced reporting to ensure all policies are being followed correctly.

■ Symantec Endpoint Protection

Symantec released version 12 of its Symantec Endpoint Protection and Symantec Endpoint Protection Small Business Edition. Symantec Endpoint Protection 12 features security engines that are reputation-enabled and use Insight's online reputation database to identify and block malware attacks. It also features SONAR 3, a hybrid behavioral-reputation engine.

■ Trend Micro Data Protection Portfolio

Trend Micro announced updated products in its Data Protection portfolio. The many products include DLP Network Monitor 2.0, which monitors and reports on data loss at network egress points; and DLP Endpoint 5.5, which delivers a workflow navigation wizard to drive down complexity and administrative burden.

■ Websense Mobile DLP

Websense announced details concerning its Mobile DLP, part of the company's Triton architecture. Mobile DLP controls the availability of sensitive data passed through mobile email and uses Websense's DLP technology to prevent data loss on iPads, iPhones, Android devices, and other mobile devices. No endpoint client or third-party software is required on devices.

■ Websense Triton

Websense released Triton, along with its related modules, to provide SMEs with cloud computing-enabling architecture that can identify and determine which users are allowed to send certain data via specific cloud applications. Capabilities include multiple SaaS and cloud application policies and customizable categories and reporting; user and group policies and reporting; and data policies and reporting by user, group, and application.

MESSAGING & TELEPHONY

■ Cisco Video Offerings

Cisco announced enhanced methods for enterprise customers to create and use video, including recording and sharing videos and content on the fly. Additionally, Cisco is announcing in-video search abilities and new ways to deploy video throughout organizations. The announcement includes the introduction of Cisco TelePresence Content Server 5.0, MXE 3500 Media Experience Engine, TelePresence System 1300, and Unified IP Phones 8941 and 8945.

■ Quest Software Migrator For Cloud Email

Quest Software's Migrator For Cloud Email lets companies migrate data from cloud-based email services, such as Gmail and Exchange, to Microsoft BPOS and Live@edu. IT managers can choose what

information needs to be migrated and the software will automatically send that data without duplicating entries.

SERVERS

■ GlobalSCAPE Hosted Enhanced File Transfer Server

GlobalSCAPE announced the release of its hosted managed file transfer product, the GlobalSCAPE Hosted Enhanced File Transfer Server. Some of the primary benefits of this server are automation, management, and auditing for file transfer activity; MIX (Managed Information Xchange) support; rapid deployment; and tiered servicing. Pay-as-you-go pricing options are also available.

■ IBM zEnterprise BladeCenter Extension & System x

IBM announced the release of two workload-bearing systems, the zEnterprise BladeCenter Extension and System x. The zEnterprise system now supports the IBM WebSphere DataPower Integration Appliance X150. System x is a pre-configured eX5 Blade System for database applications that's designed to handle transaction-oriented workloads among distributed databases.

CLIENTS

■ Flexera Software AdminStudio Suite 10

Flexera Software has announced the launch of AdminStudio Suite 10, the latest iteration of its Application Readiness solution that is designed to help companies strategically manage application

packaging and remediation while mitigating Windows 7 and application virtualization risks. Features include central management and reporting for virtual and traditional application portfolios and a unified "application-centric" application catalog.

■ HP EliteBook & ProBook Business Notebooks

HP retooled its business notebook line-up by adding its Forge design framework, which HP says embodies timeless construction, durability, and environmentally minded features. The notebook lineup includes the EliteBook 8460p and 8560p; ProBook 6360b, 64060b, and 6560b; and ProBook s-series, which includes five models. The models run from \$579 through \$1,099.

■ Lenovo T & L Series ThinkPad Laptops

Lenovo announced its latest line of ThinkPad laptops, including the T420s, T420, T520, L420, L520, and W520. Lenovo deemed these laptops "self-aware" because they can prioritize components and divert power where it is needed. Each laptop has other unique features with different battery lives and processors, as well as videoconferencing capabilities.

■ Novell SUSE Linux Enterprise Server For SAP Applications

Novell released the SUSE Linux Enterprise Server for SAP applications, which makes it possible for customers to house all of their applications on one platform. The server supports large in-memory databases and high availability for clustering. It is also

designed to deploy SAP Business Suite software, SAP NetWeaver Enterprise Search application, and SAP Business Objects Explorer software.

■ OEM Production ITX-300B-525L2 MiniPC

OEM Production has announced the availability of its ITX-300B-525L2 MiniPC. The ITX-300B-525L2 features a mini-ITX motherboard with an integrated dual-core Intel Atom D525 processor and Intel GMA3150 video graphics. The ITX-300B-525L2 comes with one mini PCI-E and one PCI slot; two SATA ports for

hard drives; six USB ports; two RJ-45 ports; and one each of COM, VGA, and LPT ports. The MiniPC also supports up to 2GB DDR3 800/667MHz memory. For more on this product, see page 31.

■ Planar Systems Planar d82L

Planar Systems released the Planar d82L, an 82-inch LCD aimed at advertising and digital signage applications in airports, shopping malls, and other public spaces. The d82L provides the slimmest profile in

its category and delivers superior image quality, while offering reduced installation and maintenance costs.

■ SAP BusinessObjects 4.0

SAP announced the latest version of SAP BusinessObjects, which is a business intelligence and enterprise information management solution. BusinessObjects 4.0 consists of the Data Services software, Information Steward, Event Insight, and Business Intelligence software. The offering supports real-time analytics, in-memory computing, more mobile devices, structured and unstructured information, and more.

■ Tyan S8812WGM3NR, B8812F48W8HR

Tyan released the S8812WGM3NR and B8812F48W8HR motherboards, which can support up to 48 AMD Opteron processing cores. The four-socket S8812WGM3NR motherboard supports Opteron 6100 series chips with up to 12 cores. It's VMware-certified and is based on the AMD SR5690 chipset. The board is available in Tyan's 4U Barebone Server System.

SERVICES

■ Dell Cloud-Based Services For Hospitals & Physicians

Dell announced subscription-based, cloud computing-enabled services that the company says are aimed at securing data access and sharing for physicians and hospitals, as well as enhancing healthcare efficiency. The services include UCA (Unified Clinical Archiving)-as-a-service; analytics and reporting-as-a-service; platform-as-a-service; and EMR-as-a-service offerings.
